

Open science within register-based research: Opportunities and challenges

The Student Representatives of the **Doctoral Programme in Epidemiology** invite you to a webinar on the **opportunities and challenges for open science within register-based research**. Two distinguished guests will present and discuss your questions on ethical and legal aspects of data sharing, research reproducibility, publication and communication, and technological tools to promote open science when using health data in population registers.

THE SPEAKERS

Gustav Nilsson is associate professor of neuroscience and coordinator of domain specialists with the Swedish National Data Service (SND). Gustav has long experience in working with research data management and open science, ranging from teaching, over support and infrastructures, to policy and implementation.

Karina Nilsson is senior researcher and associate professor in Sociology. She is part of the Research Data group at Umeå University and affiliated with Swedish National Data Service (SND) as a domain specialist for register data as well as part of the steering group for Umeå SIMSAM lab. She primarily works with Swedish register data in interdisciplinary collaborations.
